Designed for both print and web,
vertical and horizontal reading

Source Han Sans is an open source typeface that fully supports Japanese, Korean, Traditional Chinese, and Simplified Chinese, addressing the need for a unified typeface for East Asian languages. Its design is meant to emphasize shared characteristics among the languages while still upholding their diversity.

Due to its sheer size, the "superfamily," released in 2014, was made possible through collaboration between Adobe, Google, Korea's Sandoll Communications, Japan's Iwata Corporation, and China's Changzhou SinoType. The typeface's counterpart, Source Han Serif, was released three years later.
